Subject: Choices

As a US consumer I am pleased with having the option to choose between many brands of cars, refrigerators and tv's. I am also pleased that I can buy my car from Japan, my TV from Korea and my refrigerator from German.

However I'm extremely disappointed in the lack of choices I have for buying OS software. Why can't I buy an OS created in Japan or Germany. The US court is illegally protecting the US economy by allowing the continuing Monopoly of Microsoft, with some minor slap on the wrist.

Sincerly Mark Simms
